

Street Smart

Street Portfolio & Resources

Strategic road mapping with predictive analysis and centralized capacity planning. Tracks your Portfolio ROI with real time required information. Proactively manages team utilization and forecast accurate resource requirements by enabling the balance of resource assignments across the projects portfolio.

Learn more about Street Portfolio at <https://planstreetinc.com/street-portfolio/>

PlanStreet's Portfolio software is much more than just project management at a large scale. Portfolio management is concerned with making sure that the organization succeeds in achieving goals that have been set through execution of projects. The system provides you with information that you need to increase your chances of delivering a successful portfolio. Users can decide whether they want to view data by department, project type or by resource.

Key Features

- Visualize resource utilization and capacity for each team member
- Plan weekly tasks and future projects by quantifying workload over a specific timeframe.
- Balance resource work and load balance in real-time.
- Manage resources, tasks and schedules across portfolios
- Manage costs against budget and across portfolios for better financial decision making
- Prioritize projects using Street Portfolio for better corporate strategy

Predictive analysis

Street Portfolio contains a smart phase and gate functionality to add formal control processes to the client's portfolio. Phase evaluation can be conducted with in-depth visibility for the stakeholders while maintaining organizational compliance for internal and external resources making sure that initiatives succeed.

Centralized capacity planning

Street Portfolio proactively manages and allocates resources by enabling stakeholders to focus on demand and capacity planning. Time tracking of the entire portfolio helps in improving organizational performance and ensures efficiency of teams. Financial tracking, including budgeting and forecasting and expense management of billable and non billable, is a core component of Street Portfolio.

Project ROI

Project Return on Investment (ROI) is managed and tracked using a configurable dashboard and out of the box reports. Street Centre dashboard provides real time information that makes it easy to obtain the desired detail.

Proactively manage team utilization

Street Resources define achievable role-based plans and manage demand and capacity over the entire portfolio. It identifies capacity constraints and restrictions for each role, location and various other factors. It also helps in re-balancing resource capacity by providing various alternatives for their allocation and eventually updates the plan to keep most important priorities on course.

Forecast accurate resource requirements

Street Resources use real time data to enable the balance of resource assignments across the project's portfolio. It helps you to understand the overall portfolio demand and prioritize trade-off decisions.
